

SPRING 2021 COVID-19 DAILY DASHBOARD

Monday, May 24, 2021

Testing and case numbers reported between 9 a.m. May 21, 2021 and 9 a.m. May 24, 2021

Please Note: This is the final COVID-19 Daily Dashboard for the Spring 2021 semester. During the summer, the dashboard will be posted weekly on Fridays beginning on Friday, May 28.

The Seton Hill University COVID-19 Daily Dashboard provides campus community members with important information and updates during the pandemic, including numbers of positive cases on campus, information on the COVID-19 situation in Westmoreland County, as well as changes to the Return to Campus plan and important reminders.

Universal Testing

Seton Hill University required Universal Testing of all students, faculty and staff engaged in face-to-face activities during the Spring 2021 semester. Testing occurred throughout the month of January in preparation for the start of traditional undergraduate classes on Tuesday, February 2, 2021. Campus community members were also able to submit results of tests conducted off campus. A total of 1,573 individuals (1,179 students and 394 faculty and staff) were tested as part of Universal Testing. Of those, a total of 38 campus community members (31 students and 7 faculty and staff) tested positive for COVID-19. Please note, individuals who had tested positive for COVID-19 within 90 days prior to the Universal Testing window were excluded from testing until their presumed 90-day immunity expired. Those individuals will be tested during the Spring 2021 semester and will be included in the ongoing testing numbers.

Symptomatic, Contact and Surveillance Testing Results

The numbers in the following dashboard represent all COVID-19 testing of students, faculty and staff outside of the Universal Testing program, including the testing of symptomatic individuals, contacts of positive individuals and surveillance testing that will be conducted throughout the Spring 2021 semester. The dashboard includes all testing, positive cases, negative cases under investigation and cases that have been cleared or recovered beginning on January 5, 2021. This dashboard reflects Seton Hill’s efforts to track and manage COVID-19 cases of individuals actively engaged on Seton Hill’s campus.

**Student Symptomatic, Contact and Surveillance Testing and Cases
May 24, 2021+**

Tests Administered or Reported (May 21-24, 2021)	Positive Tests- Resident Students (Results Reported 21-24, 2021)	Positive Tests- Commuter Students (Results Reported May 21-24, 2021)	Negative Tests (Results Reported May 21-24, 2021)	Persons Under Investigation/Test Results Pending (As of May 24, 2021)	Recovered (May 21-24, 2021)

Definitions

Tests administered or reported include tests administered by Seton Hill University's Office of Health Services or administered by outside medical personnel and reported to Seton Hill University by campus community members on the date noted. Tests may be conducted for symptomatic individuals as well as known close contacts of individuals who have tested positive for COVID-19.

Positive tests indicate positive test results that are reported to Seton Hill University by noon on the date noted. All individuals with positive test results remain isolated until they are cleared for a return to face-to-face classes or work by medical personnel following CDC guidelines.

Negative tests indicate negative test results that are reported to Seton Hill University by noon on the date noted. Individuals with negative test results are cleared from isolation and allowed to return to face-to-face classes or work.

Persons Under Investigation/Test Results Pending represents individuals who have been tested for COVID-19 but for whom results are still unknown. Test results can take several days. All persons under investigation are in isolation either on or off campus until they receive negative test results or are cleared by medical personnel following CDC guidelines if a positive test is received.

Recovered represents the number of individuals who are permitted to leave isolation following a positive test following CDC guidelines and medical clearance on the date noted.

Total Spring 2021 Tests Administered or Reported, Positive Tests, Total Spring 2021 Negative Tests and Total Spring 2021 Recovered represent the total of each category since January 5, 2021.

Seton Hill will use **Contact Tracing** methods throughout the semester to identify known close contacts of those who have tested positive for COVID-19 or those who are suspected of having COVID-19 and are awaiting test results. Testing and contact tracing may lead members of the Seton Hill University community to be required to be in **isolation or quarantine** pursuant to CDC guidelines.

Isolation is the method used to separate individuals who are infected with or are under investigation for COVID-19 from people who do not have the virus. Seton Hill requires campus community members isolate for 10 days from the date of their positive test as long as symptoms have improved and they have remained fever-free for at least 24 hours without the use of fever reducing medications. Isolation of symptomatic persons under investigation is lifted if a negative test is confirmed as long as the individual does not have a known exposure.

Quarantine is used to keep individuals who might have been exposed to COVID-19 away from others to help prevent the spread before someone knows they are sick. Quarantine lasts for 10 days from the date of the last contact with an infected individual as long as the individual in quarantine tests negative on days 5 and 10. If the quarantine individual does not test at days 5 and 10, quarantine lasts 14 days.

Westmoreland County Dashboard Week Ending May 20, 2021

<https://www.health.pa.gov/topics/disease/coronavirus/Pages/Monitoring-Dashboard.aspx>

Difference in confirmed cases (most recent 7 days versus previous 7 days): -55

Incidence rate (most recent 7 days) per 100,000 residents: 39.6

PCR Positivity rate (most recent 7 days): 4.9%

Difference in the average daily number of COVID-19 hospitalizations: +3.3

Difference in the average daily number of COVID-19 patients on ventilators: +4.0

Percent of hospital emergency department visits in the most recent 7 days due to COVID-like illness: 0.4%

Campus Return Plan Updates

Quarantine protocols in the Return to Campus plan have been updated as of April 7, 2021 and can be viewed at <http://www.setonhill.edu/ReturntoCampus>

Important Reminders

Throughout the Spring 2021 semester, Health Services will be conducting random surveillance testing of Seton Hill University students attending face-to-face classes. Students should watch their Seton Hill email for an invitation from Health Services to participate in this required testing.
